Project

Law firm billing application

Customer

Australia

Full Stack developer

While working on this project, we developed an admin site and API for law firm billing software, including custom fee schedules, custom billing rates, automated billing functions and other properties. Report and invoice creation. Task creation and attachment. Send invoices by email.

Duration

6 months

Technologies and tools

React
Django-Graphene
GraphQL

Responsibilities

Requirements clarification
Estimation, prioritization
Implementing UI
Communication with customers

Project

Diplomatic institutions

Customer

Ukraine

Front end developer

The app is designed to automate all business processes in diplomatic institutions all over the world. The system follows a microservices design pattern, which allows for the distribution of product modules in different locations, in or out of securely encrypted networks. Every model can be scaled separately, depending on the amount of data and performance requirements.

Duration

6 months

Technologies and tools

React
Angular
REST API

Responsibilities

Estimation, prioritization
Implementing UI

Project

Magazine portal

Customer

US

Front end developer

This system consists of two parts: a public blog and an admin panel. The blog is for viewing news, interviews, upcoming events, and magazines. On the admin part, the user managed the content for each element of blog (articles, events, interviews).

Responsibilities

Estimation, prioritization
Implementing UI

Project

A platform for technicians to work in the field

Customer

Europe

Front end developer

The whole project aims to implement a platform for field technicians' operations. It will be able to manage the assistance requests and assign them to a technician by back-office operators using a Web Application. Each technician will report on all the activities related to the assistance using the Mobile Application, and all the information must flow back to the Backend Engine and be made available to Backoffice operators. On the web part, users can manage the content depending on the roles.

Duration

4 months

Technologies and tools

Angular
OpenStreetMap
REST API

Responsibilities

Requirements analysis and clarification
Estimation, prioritization
Implementing UI

Project

Privacy extension

Customer

UK

Front end developer

This solution is aimed at users who want to know more about their privacy and the data that they provide to various sites. The extension provides answers to the most relevant privacy questions that are available with a single click. If the user wanted to know more, then he could purchase a paid subscription. A control panel was also developed to track the number of subscriptions.

Duration

3 months

Team Size

4 members

Technologies and tools

React
REST API
Chrome Extension API

Responsibilities

Requirements analysis and clarification
Estimation, prioritization
Implementing UI
Implementing efficient front-end architecture and coding practices

Project

Site for sports fans

Customer

UK

Front end developer

Site for sports fans, on which you can make bets. With a wide range of sports, from football to golf, from MMA to volleyball. The development was carried out on a mobile application and a website.

Duration

1 year, 2 months

Team Size

7 members

Technologies and tools

jQuery
Internal CMS
PHP
Vue

Responsibilities

Requirements analysis and clarification
Estimation, prioritization
Implementing UI
Collaborated with back-end engineers to integrate front-end components

Project

Hiring platform

Customer

US

Front end / Full stack developer

A platform where recruiters create positions and integrated with other providers. Candidates then participated various types of interviews (from live to on-demand), and recruiters then evaluated them. Communication with the candidate could be set up via email, chatbot, or SMS.

Duration

4 years, 2 months

Team Size

18-38 members

Technologies and tools

React
Angular.js
Accessibility
GraphQL

Responsibilities

Requirements analysis and clarification
Estimation, prioritization
Distribution of tasks
Led a small team, mentored team members
Collaborated closely with UX/UI designers to transform mockups into interactive, responsive, and visually appealing interfaces
Conduct code reviews and maintain coding standards
Actively participated in agile development processes, including sprint planning, stand-up meetings, and retrospectives, contributing to iterative product improvements
Participated in the redesign of a customer dashboard interface
Helped with Accessibility and Content Security Policy for Audits
DB migrations and Backend business logic
Technical Design for Initiatives

Additional Information

I expect interesting projects, new practical skills and opportunities for professional growth
